Smart Pilgrim Companion: Cloud-Based Spiritual Travel & Temple Assistance Platform Using AWS

Team Members:

- ADHIMULAM BHARGAV SAI VISWANATH (23BQ1A4201)
- BEZAWADA MEGHANA (23BQ1A4218)
- BODEPUDI NAGA SOUMYA (23BQ1A4222)
- DERANGULA VISHNUVARDHAN (23BQ1A4238)
- JUJJURI LAKSHMI SOWMYA (23BQ1A4269)

Under the Guidance of (APSSDC):

- Mrs. Bethala Sumana, APSSDC
- Mr. Juttuka Lovababu, APSSDC

Department: CSE - (AI & ML) [CSM]

College: Vasireddy Venkatadri Institute of Technology (VVIT)

Location: Nambur, Guntur

Pilgrimage planning is fragmented

Key challenges pilgrims face when organizing their spiritual journeys using traditional methods.

01

Scattered Info

Temple history, specific daily timings, and cultural context are scattered across multiple disjointed sites.

02

Multiple Sources

Travel logistics require planning across various transportation, lodging, and local booking agencies.

03

Hard to Compare

Budget constraints, itinerary variations, and scheduling timelines are manually tracked and hard to align.

04

Guidance Gap

Devotees lack a clear, centralized, and step-by-step assistant framework to start their spiritual path smoothly.

A single cloud-ready platform for temple discovery and pilgrim travel planning

Platform Features

- ✓ Temple discovery
- ✓ Temple details
- ✓ Trip planner
- ✓ Route and budget support
- ✓ Recommendation output
- ✓ Responsive UI

Localhost Development

GitHub Pages Deployment

AWS EC2 Migration

Nginx + Gunicorn

Flask Backend

AWS RDS MySQL

Architecture layers:

Full Tech Stack Overview

From idea to deployed cloud project

The screenshot shows the GitHub 'Branches' page for a repository. At the top, there are tabs for 'Overview', 'Yours', 'Active', 'Stale', and 'All', with 'All' currently selected. A 'New branch' button is in the top right. Below the tabs is a search bar labeled 'Search branches...'. The main content is a table listing the repository's branches.

Branch	Updated	Check status	Behind	Ahead	Pull request
main	3 hours ago	✓ 4 / 4		Default	...
aws-final-deployment	1 hour ago		62	13	...
gh-pages	2 hours ago	✓ 3 / 3	113	17	...
bhargav-dev	3 hours ago		26	0	#38 ...
Sample_UI_UX_Version1_Pics	4 days ago		95	0	#8 ...
ui-feature	5 days ago		96	0	#6 ...
soumya-data	5 days ago		102	0	#5 ...
sowmya-content	last week		110	0	#3 ...
vishnu-research	last week		105	0	#2 ...
meghana-ui	2 weeks ago		112	0	...

Key Features

1

Temple Search

- Easily find and filter sacred destinations.

2

Trip Planner

- Customize budgets, days, and routes.

3

Recommendations

- Get smart, optimized itinerary suggestions.

4

Explore

- Discover nearby attractions and services.

5

About & Info

- Access project background and credentials.

6

Responsive UI

- Seamless experience on mobile and desktop.

Dual Deployment Architecture

GitHub Deployment

GitHub Pages

Web hosting for static content

React build

Compiled frontend assets

Public frontend output

User-accessible web interface

AWS Deployment

EC2 - Virtual Server

Nginx - Web Server & Reverse Proxy

Gunicorn - WSGI Server

Flask - Python Web Framework

RDS - Relational Database

CloudWatch - Monitoring Service

Team Contributions

COMMIT ACTIVITY & INSIGHTS

Results + Metrics

Results

- Working application completed.
- GitHub and AWS deployment evidence collected.
- Testing and cloud validation completed.

Evidence

- Frontend pages
- Backend API validation
- Nginx/Gunicorn service status
- RDS monitoring
- Final output screens

CloudWatch (RDS)Monitoring

EC2 instance Configuration

Learnings + Future Scope

Learnings

- React frontend architecture
- Flask API development
- Dataset-driven backend design
- EC2 deployment workflow
- Nginx and Gunicorn setup
- RDS connectivity and monitoring

Future Scope

- CloudFront CDN integration
- Route53 domain management
- Real-time system notifications
- AI-driven pilgrim recommendations
- HTTPS security and domain setup
- Admin portal for data management

The Vision

“Smart Pilgrim Companion transforms fragmented pilgrimage planning into a unified cloud-enabled experience.”

Thank You

Cloud-Enabled Experience
